

1.12. MEANS FOR PARAMETERS DETERMINATION OF EMERGENCY MODES OF THE LOAD CENTER OF IPS OF UKRAINE

Complex databases of emergency mode parameters are intended for digital emergency automatics and protection of Dnister PSPP. In case of unexpected situations, an application of the developed databases will allow to provide a rapid processing of long-range modes (including emergency ones) that will enhance performance reliability of Dnister load center and adjacent 330 KV transmission networks.

There are no analogues in Ukraine.
