

1.14. SOFTWARE COMPLEX "DOMEN"

"DOMEN" is designed to improve an effectiveness of solving technological problems of power supply companies (PSC) and energy-consuming enterprises (ECE).

The complex includes a database and management tools that allow to store, verify, display in graphic and text forms, perform statistical processing, analysis and simulation of total electric load of PSC and ECE taking into account external factors that affect it.

Sample of tasks solved in "DOMEN"

The use of "DOMEN" contributes a qualitative planning of normal and repair operating modes of PSC and ECE, which is especially important in the context of future market of bilateral contracts, day-ahead contracts and balancing electricity market.
