

### 3.01. VOLTAGE (CURRENT) REGULATORS RENAP-1V (РЕНАП-1В)

They are intended for current (to 20 A) and voltage (of magnetic flux) regulation in windings with a voltage of 1x220 V or 1x380 V of electromagnetic vibration motors. RENAP-1V regulators, as a part of vibration electric drive, are widely used by glass manufacturers, building materials manufacturers, at the mining-and-processing integrated plants in the systems of transportation and batching of discrete materials.

*More than 200 systems with RENAP-1V regulators are successfully operating at the enterprises of Ukraine, CIS countries and the Baltics.*
