

### 3.02. VOLTAGE (CURRENT) REGULATORS RENAP-3T (1T) (РЕНАП-3Т (1Т))

They are intended for alternating current (to 1200 A) regulation in single-, two-, three-phase windings with a voltage of 1x220 V, 1x380 V, 3x380 V of special transformers or in the sections of precision heaters. As a part of the systems of electrothermic treatment or materials' melting, RENAP-ZT (1T) are widely used by building materials manufacturers, manufacturers of special fibers, polymeric and stoneware products, metalware hardware (stamping tools).

*More than 100 systems of heat treatment or materials' melting with RENAP-3TZ (1T) regulators are successfully used at the enterprises of Ukraine, near and far abroad.*
