

6.06. INDUCTION EQUIPMENT FOR AIR AND LIQUID HEATING

*In-line water heater
with a power of 3 kW*

The development is intended for heating the liquids and air in the heat supply systems of industrial and residential objects.

Advantages

Induction equipment has high reliability and electrical safety. This is an alternative to the use of mineral fuels in the heat supply systems. It has reduced dimensions and a wide power range.

Main technical specifications:

Supply voltage, three-phase network, V	380
Supply frequency, Hz	50
Power, kW	2 – 100
Efficiency, %	over 90
